The LIGNA 2019 show made it markedly evident: the trend goes clearly to edge banding with PUR bonds creating a durable zero joint.

The edge quality in terms of optic, water proof and temperature resistance accordingly is enhanced to a remarkable level.

This level can be easily reached as well with your **existing** edge banding machine!!

The gluing unit EasyPUR consequently is optimized operating PUR glues in terms of bonding characteristics and application requirements:

- * user friendly – do not scare about PUR anymore!
- * low cleaning
- * low maintenance
- * suitable on almost all common edge banding machines

HOMAG

GIBEN

SCM

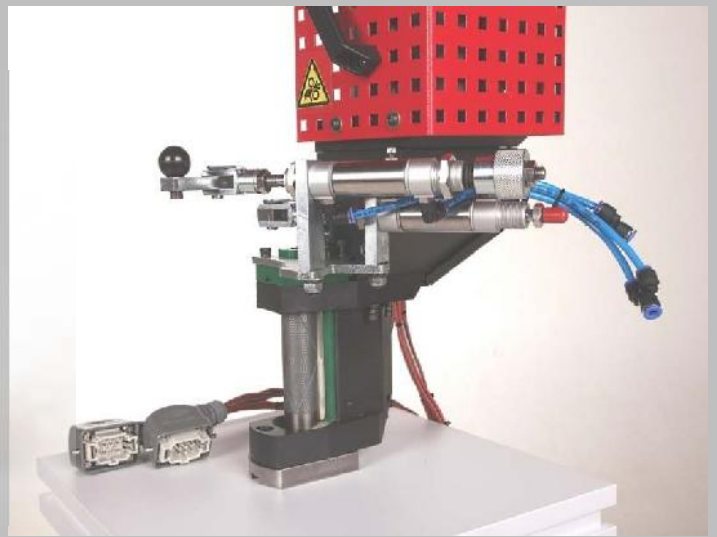

- * flexible and modular components for different melting capacities
- * optional with automatic close of dosing stabs
- * worldwide about 150 installations (as well in Germany), field proofed
- * PLUG AND RUN – conversion on the edge bander in most cases very simple – change back to old gluing unit still possible
- * CE - declaration

your advantage: with EasyPUR we do offer a cost efficient upgrade on your existing edge banding machine.

With our coaching we are ensuring a proper installation, commissioning and staff training passing tips and tricks to your staff for easy handling in everyday life.

In case of any questions feel free to contact us at any time.

We are always available! Give a call on mobile +49(0)1727096812, Johannes Rettig
